

PAD ATTACHMENT

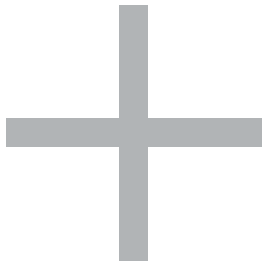

Gain a Better Hold on Performance

Let us help you create feminine hygiene and light adult incontinence products that will truly meet your consumers' wants and needs. The first step is to address your product's attachment and stay-in-place challenges by looking at those needs in a new way.

New Perspectives Lead to Innovative Solutions

Peel and residue testing have long been the industry standard for pad attachment adhesives, but they don't tell the whole story. In fact, there was no test to accurately measure stay-in-place performance. So we invented one. Staybility™ will test the stay-in-place performance of any pad attachment adhesive on any fabric.

TESTING

WHAT:

Put your disposable pad products to the test using our patent-pending Staybility™ methodology and other test methods to gain a better understanding of their performance under life's activities and stresses. Receive from our experts test results and any needed recommendations on choosing the right adhesives.

WHERE:

Bostik's controlled testing facility

INCLUDES:

Industry-leading pad attachment adhesive performance testing for initial peel, "in use" peel, and residue. In addition, Bostik offers positioning adhesive testing with our patent-pending Stability™ methodology to measure stay-in-place performance.

TERMS:

Please **contact Bostik** for availability and any associated cost.

Staybility™
TESTING by Bostik

SMARTER VALUE.

Better assessment of pad attachment adhesive performance; more accurate prediction of performance; more informed adhesive choices based on results from testing of adhesives on various fabrics, surface treatments, and more.
